

Our Company

We are an innovative and collaborative company that provides a holistic approach to Loss Control and Risk Management. We work with the insured and our clients to recommend realistic solutions. We have access to insurance claims data and use that information to help our clients and the insured with strategic advice. In many cases our most effective solutions often result from open discussion with our clients and we ensure that regular communication is maintained. We often review the insured's Management Procedures to help us understand how they manage their business, which enables us to offer a more proactive and bespoke approach to managing risk.

We deliver real value by applying our expertise to meet our client's needs. We have a proven track record, which has enabled us to deliver a world-class service, generating repeat business and leading to appointments from new clients. Our professional capabilities range from Property, Construction All Risk and Erection All Risk Surveys to Catastrophe Post-Damage Inspections and Insurance Valuations.

We have brought together industry professionals with expertise in Heavy Civil Engineering, Vertical Construction, Solar Power Plants, Waste to Energy Plants and Wind Turbine Technology.

eRisk - Technology at work for you

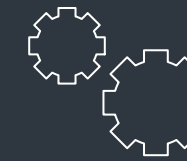

BACKGROUND

Over the past year or so, Mitig8 have been working with its partner BCCORP SOLUTIONS to improve the way recommendations are issued to the Insured. In the past we have found that our recommendation reports take time to prepare and once issued to the Insured, they are difficult and time consuming to track. In some cases, the Insured is not able respond in a timely fashion, which may leave the project exposed to a potential disaster.

AUTOMATED RESPONSE...

Once action has been taken by the Insured, they need not send an email to notify anyone... eRisk will automatically send an email to Mitig8. Once we are happy that the recommendations are dealt with, eRisk will send an email to all parties concerned to indicate that the status of the recommendation has been closed or requires further action. Again, this is automated by eRisk saving valuable time.

CUSTOM SOLUTIONS

Mitig8 will continue to invest and strive to promote risk engineering around the world. We will be looking into other innovations to introduce them into the risk management arena. Including iPad applications and interactive tools. Contact us if you have any questions

STRATEGIC RISK MANAGEMENT

Another great feature will be that eRisk will track the type of recommendations issued over each project. Statistical information reports will be provided and this will help us target inherent key areas of weakness that may require more strategic action, such as preparing procedures to help mitigate the particular risk. This can be done with the Insured at head office level, so that ALL projects benefit from the measures to be taken.

- TUNNEL CONSTRUCTION
- BRIDGES, AIRPORTS, ROADS
- DAMS

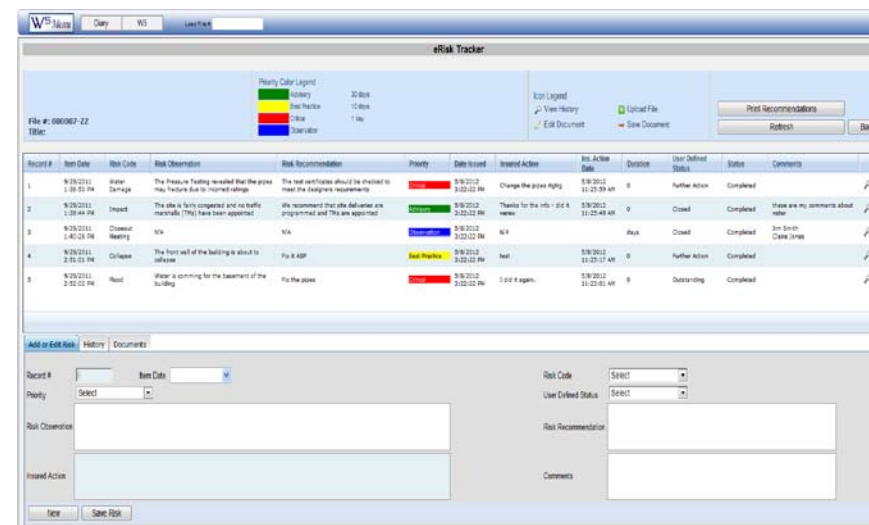

risk solutions for your business needs

MITIG8 PROVIDES A TOTAL SOLUTION TO CONTROLLING INSURANCE RISK.

WHAT IS eRisk?

eRisk is a powerful interactive risk management tracker that has been specifically developed for the insurance industry, by our in-house Risk Engineers and a leading software provider.

eRisk will enable the Broker and Underwriter to first of all approve risk recommendations, through the eRisk SECURE PORTAL before issuing them to the Insured. Once approved, the recommendations will be tagged with the issue date and time. The insured will log into the eRisk SECURE PORTAL to update the action taken, which will automatically email the Mitig8 engineer to advise them that the action has been taken. The date on which action is taken is also tracked through one of the Key Performance Indicators (KPIs), stating how long the recommendation took against the predetermined target action date.

REMINDER EMAILS SENT AUTOMATICALLY TO THE INSURED

Automatic email reminders will be sent out every, 7, 14 and 30 days to the broker, Underwriter and Insured notifying them that the recommendations need to be actioned, saving valuable time and resources from our administrative team in chasing recommendations.
